HOW TO RESET MICROCOMPUTER

When either or both of the following conditions occur, follow the procedure below:

CONDITIONS

* The digitron display does not light

* The unit does not stop, even when the "STOP" button is pressed.

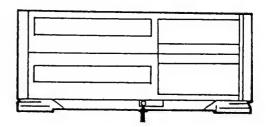

PROCEDURE

- 1. The reset switch is accessed through as unmarked hole, which is pointed by arrow is the illustration.
- 2. The unit is reset when a long, narrow probe(eg, the end of a paper clip) is inserted into the hole.

 $^{\rm th}$ After resetting the microcomputer, set

the clock to the preset time according to the owner's manual.

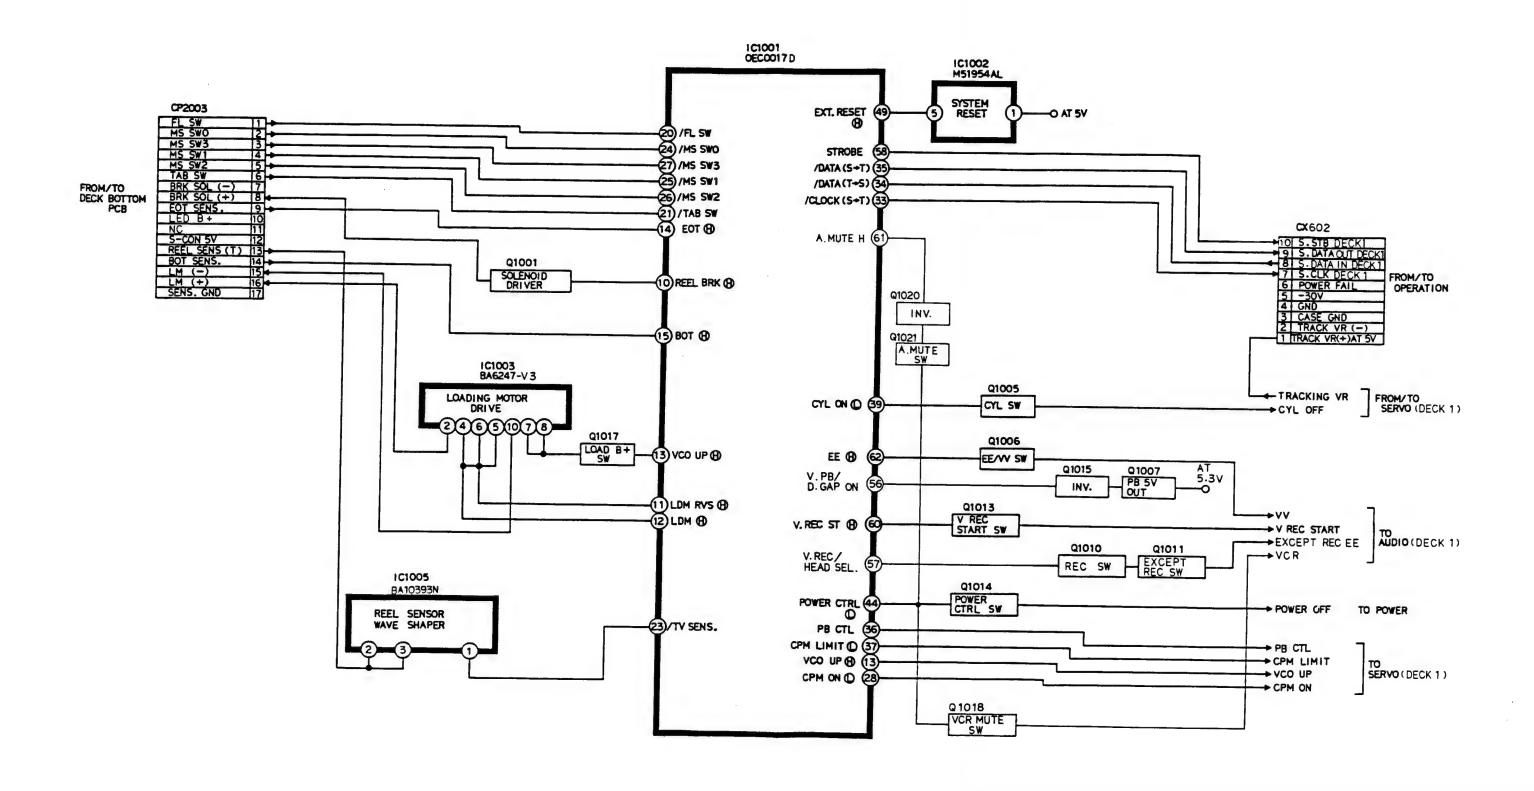

A back-up circuit protects the unit from entering reset mode, even if the AC cord is unplugged from its AC outlet outlet.
